The IontoPatch Family of Products

Four products provide different dosage and treatment options based upon each patient’s clinical presentation and tolerance.

NEW! IontoPatch®

IontoPatch®

Treats most areas, including elbows, knees, wrists, feet and shoulders. 14-hour average patient wear time.*

80mA-min dose strength

- Lowest current to treat patients with sensitive or fair skin, including the elderly.

IontoPatch® 80

Treats most areas, including elbows, knees, wrists, feet and shoulders. 14-hour average patient wear time.*

80mA-min dose strength

- More therapy in fewer treatments.
- Patients with severe conditions improve faster allowing a full treatment regimen sooner.

IontoPatch STAT®

The same IontoPatch 80 benefits in shorter 4-hour average patient wear time.* Treats most areas, including feet, elbows, knees, wrists, and shoulders.

80mA-min dose strength

- Treats patients who require or desire shorter wear time.

IontoPatch® SP

Treats smaller areas, including fingers and Achilles tendon. 14-hour average patient wear time.*

40mA-min dose strength

- Designed to adhere and contour to small anatomical areas like fingers and Achilles.

*Delivery time is dependent upon individual patient skin resistance. Study data on file.

- The Original Iontophoretic Patch proven by experience:
  - over 6 million administered.
  - supported by peer-reviewed published studies.
  - first and only independent published outcome-based study comparing iontophoresis to injection.

- Four products that treat large and small areas, offering three different wear times and three different dose strengths

- No charging station or controller required
- Wrappable, compressible, weight bearing
- Extended time-released iontophoresis
- More cost-effective & less time consuming
- More drug delivered & remains localized
